

BALANCING YOUR DUAL HELIX SPINNER

The blades may be out of balance due to the shipping and installation process. If the balance is off, the measurements of **D1** and **D2** will be different. To correct this, you may use your hands to bend the copper blades at the connection areas between the blades and brass plates, shown by the blue arrows. Keep adjusting in small increments and measuring the distances until the two blades are equidistant from the center pole.
