

Instructions for Reducer Installation (**MUST READ!**)

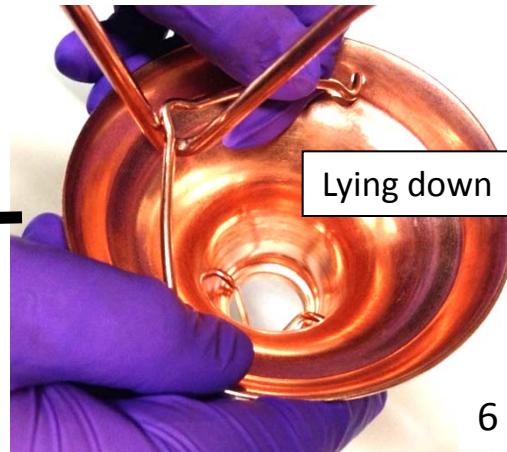

Place the hanging wire in a lying down position.

While the wire stays lying down, pull one end of the wire out of the hole.

Lift the wire to its upright position. Pull at both ends and away from the center to further secure the wire. Hook the rain chain to the bottom of the reducer.

Connect the reducer to a V-shaped hook (not included, comes with rain chain order). Secure the loose end back to its hole while the wire remains lying down.
